

VD 500 - Flow sensor for wet compressed air For measuring immediately downstream of the compressor in moist air up to 356 °F

Benefits at a glance:

- New: Unique sensitivity in the lower measuring range: Measures from as little as 6.56 f/s and thus covers the complete operating range of variable speed drive (VSD) compressors
- Particularly suitable for extremely high flow rates
- Flow, total consumption, temperature and pressure
- Measurement at high temperatures, max. temperature 356 °F
- Can be used in pipes from 3/4" to 24"
- Installation via 1/2" ball valve under pressure

FIELD OF APPLICATION:

- Measurement immediately downstream of the compressor
- Measurement at high temperatures

Typical applications:

- Measurement of the capacity of compressors
- Compressed air audits
- Efficiency measurement of compressed air systems

Installation requirements:

- After functioning water separator
- In horizontal lines (recommended) or in risers

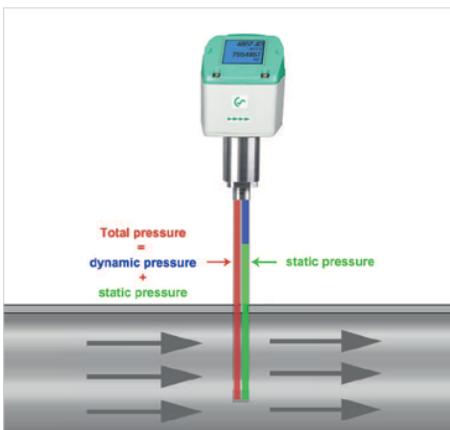

TECHNICAL DATA VD 550

Operating pressure:	-14.5...+435.1 psi (g)
Ambient temperature:	-4...158 °F
Power supply:	18...36 VDC, 5 W
Signal outputs:	As standard: RS 485 (Modbus-RTU), 4...20 mA, pulse Optional: Ethernet Interface (PoE), M-Bus

The integrated, precise differential pressure sensor measures the differential pressure/dynamic pressure at the sensor tip. The pressure depends on the respective gas velocity. The flow is therefore easy to determine by means of the pipe diameter.

The additional measurement of temperature and absolute pressure and calculation of the relevant density means that measuring can be carried out for various gases, a wide variety of temperatures and pressures.
